1944-1945 Price List

of

Superior Glads

This past season our planting has again been much smaller than in pre-war times but we have considerably more bulbs than last year and had much better growth this year. Also, we have grown more new varieties than for the last few years. However, with the general shortage of bulbs, we urge that orders be sent early to insure their complete filling. Due to shortage of help we cannot finish digging, curing, cleaning, and fumigating bulbs until rather late in the year and we do not expect to be able to make many shipments until after February 1st this season.

To encourage early orders, we again make inducements in the form of discounts in extra bulbs for early orders as follows:

SPECIAL DISCOUNTS

On all orders for \$10.00 or more accompanied by cash in full select 20% extra value in bulbs if order is sent on or before Dec. 15th. 10% extra value in bulbs after Dec. 15th. Varieties starred (*) not to be included for discounts nor are those varieties offered in quantity list, nor collections. However, varieties on quantity list other than those starred may be included with 10% extra count on orders before Dec. 15th.

Prices prepaid except quantity prices. Most orders will be sent after March 1st but express orders may go out as soon as bulbs are ready. On orders of less than \$2.00 please include 25c extra for postage and packing. One bulb or bulblet at one-eighth the price of ten; five at the ten rate or 25 at the hundred rate unless otherwise priced and item does not total less than 10c. All stock offered subject to prior sale and to crop and conditions beyond our control. We ask that all orders be placed before April 1st if possible.

GRANT E. MITSCH

"Gladland"

Lebanon, Oregon, U. S. A.

VARIETY COMMENTS

Since we are giving very brief descriptions in our price list this year, we have concluded that many fanciers would be interested in our personal impressions of some of the varieties that we list. First we will consider the reds, a class which has long included many varieties but most of which have possessed some major fault. Improvements are gradually appearing in better facing and finer color. Of the cheaper reds, **Algonquin** is still one of the finest. While it had rather short stems with me, **Burgundy** gave magnificent spikes with many well faced blooms open. **Burma** is an extremely heavily ruffled deep rose red of large size and most attractive form. The new **Chehalem** appears to be a taller version of **Algonquin** with perhaps one or two more blooms open and should be heard from in the future. **Commando** is a soft clear light red of large size. Of a rather unusual tone of red, **Flame Queen** looks good. The biggest spikes of red that I have had came from **Errey's Scarlet**, a very tall flower with many blooms open. Its most serious fault apparently being that it makes such a heavy flower head that spikes occasionally break under the weight. **Kenwood** makes fine large blooms of medium deep rich red. Some came with faulty facing this year. **Marsellaise** is a very large brilliant red with light midribs. One of the clearest in color tone was **Mercury**. **Pillar of Fire** is very late but opens a long string of intensely red blooms, while **Red Plush** is quite early and has very large wide open flowers. The deep red **Ruddigore** with its almost blackish red blotch is a very attractive flower and seems a consistent performer. **Scarlet Queen** is a large bright red. One of the most intense scarlet reds is **Stoplight** and it looks like a fine commercial. Several other new reds we did not get to evaluate this year, some of them being grown only from bulblets.

There have been many fine additions to the pink and salmon pink classes. First there is **All Ruffles** which is described by the name. **Ballad** is a very fine ruffled salmon pink with yellow throat. This should make a fine commercial. We still like **Conquest** which with us has not been surpassed for purity of color and charm. **Cooney Lass** might almost be described as a pink Picardy. Some of the most perfect spikes we have grown were from **Criterion**. Of the pure pinks, **Eglantine** appears one of the best having large ruffled flowers of soft light pink enhanced by white throat. One of the most outstanding commercials is **Ethel Cave Cole**. **Felicity** is a deep salmon pink of Picardy type. **Fiancee** and **Glamis** are good pinks with white throats, being entirely distinct from each other. One of the most heavily ruffled of the large glads is **Genghis Khan**. We list two **Geraldines**, the New Zealand variety being a large deep salmon pink after the order of Miss New Zealand and Pruitt's variety is a most lovely soft salmon blending to creamy yellow throat, and it is a quite large flower heavily ruffled and fluted. One of the surprises of the season was the splendid spikes given by **H. R. Pitt**, a large salmon pink with cream throat. **Jeanie** is a most distinctive flower with its graceful slender spikes well supporting the large beautiful blooms. **Mandaleen**, **Marleen Both**, and **Mrs. E. Both** all have salmon pink blooms with lighter throats but each is distinct and the latter seems to have unusual life imparted by a glowing sheen. We have bloomed it only from small bulbs. **Phoebe** is another of similar color to the above named varieties but grows very tall. Perhaps the purest pink with which we are familiar is **Pink Paragon** and it should surely make a fine commercial variety. **Spitfire** would seem hardly to belong here, yet it is a pink of unusual shade with great carrying power and makes fine spikes.

There are not so many rose colored Glads but the number is increasing. The deep rose **H. R. Hancock** with large white blotches is a most impressive flower. **Malta** is very large and tall and of fine color although the florets are somewhat loosely attached to the spike. **Miss Wisconsin** looks most promising. We had magnificent spikes of **Oregon Rose** this season and expect another year to offer an improved taller growing strain. **Rose Ruffles** and **Rosy Morn** both look good as commercials. The deep rose **Timor**, one of our own introductions, should make a fine cut flower variety. It is very clear in color and seems very resistant to heat.

The orange and buff varieties will be considered together. While very little stock seems available and we have bloomed it only from small bulbs, the light buff white **Athlone** gives promise of making big exhibition spikes. **Dr. Whiteley** is a tall very clear colored orange buff some shades lighter than **Lantana** which is a

very beautiful light orange. **Marimba** was one of our tallest Glads. The golden buff ruffled **Vassar** is somewhat older but still one of the most beautiful varieties. **Bobby Dazzler** is an attractive unusual shade that might almost be described as burnt orange. **Dazzler** is a fiery orange scarlet with darker blotch. **Rio Rita** is a fine red orange with deep colored feather. We are very favorably impressed with the light orange scarlet **Halloween** which had fine spikes of good sized clear colored flowers. **Padre** is a distinct novelty of both unusual form and color.

We did not grow many yellows this year. **Autumn Gold** is a late intense golden yellow. **Cream Puff** made very nice blooms for us this year and is a light yellow rather than a cream. It is larger than most yellows. The light yellow heavily ruffled **Discovery** and the deep yellow **Spotlight** (do not confuse with **Stoplight**) both with red feathers are quite unique and attractive. **Oregon Gold** is a nicely ruffled tall very light yellow and **Crinkle Cream** is a somewhat deeper yellow of good size. **Golden State** is one of the finest deep yellows.

While perhaps not as many pure white Glads are being introduced as were a few years ago, many new creams of great merit are appearing. **Alpine** was perhaps the most chastely beautiful white I have grown. The new tall growing **Casablanca** is slightly like **Myrna** but taller growing and of somewhat different form. It should be a good commercial. **Corona** by reason of being slightly flushed with pink perhaps should not be included here but however it is classified, it is becoming one of the most popular Glads. **Crystal** is a huge white capable of making good exhibition spikes. **Fair Angel** looked very good. Among the finest spikes in our planting this year were some of **Leading Lady**. This one will surely win many prizes for some time to come. **Matterhorn** is still one of our favorites as an exhibition white, and it will be difficult to find more beautiful blooms than well grown **Myrna**. **P. 39** looked similar to **Leading Lady** and will doubtless be a good one. **Silention** is a blotched white after the style of **Margaret Beaton**. Both are good. **Snowcruiser** may prove to be one of the best exhibition whites but we have not yet bloomed it from full sized bulbs or under very favorable conditions. While not similar to **Leading Lady**, **Wanda** is another nice cream sport of **Picardy**. The vigorous strong growing **White Gold** made beautiful blooms on tall spikes and was much sought after by the florists. This will surely be grown by the millions when stock is available, and it is not only a cut flower variety but is winning many awards on the show bench. Another fine clear cream with unmarked throat and nicely ruffled blooms on good spikes is **Winston**.

For years there has been an effort made to improve on **Minuet** but many lavenderers have come and gone, many of which were supposed to be that improvement. Time alone will tell but it appears that some of the new ones may be with us for a while. **Badger Beauty** is one of the most attractive lavenders and opens six or eight well faced blooms on quite tall spikes. **Barbara Jane** is a tall growing lavender with darker blotch. Perhaps the most striking recent variety is **Elizabeth the Queen**. It is not as tall as we might wish but seems to be improving in this respect. Its large ruffled blooms are very impressive. The rapidly increasing **Lavender Ruffles** is a nice light lavender. The big lavender **Remembrance** has an odd mauve cast in its coloring which does not appeal to us but it seems to go well as a cut flower.

We are listing few blues at present but of these, **Blue Ensign** looked good this year and seems capable of making about as large a spike as any in its class. Of the purples, **Convoy** seems a definite advance and should be a fine commercial. **Mrs. Mark's Memory** is a very large flower, while **Parnassus** is one of the darkest. **Rangoon** is possibly the most beautiful purple.

The smoky rose **Beltrami** appears to be a worthy addition to the smoky class. **Bronze Wings** is quite well described by its name. We believe the tall growing large new smoky, **Carol**, should become a popular fancier's flower. For growing huge exhibition spikes, **C. W. Gannett** should fill the bill, and while **Intrepid** has much smaller florets its long spike with many open make it a showy flower and the color seems to take better with florists than many smokies. Although not as bright as **Vagabond Prince**, **Penzance** reminds one some of that variety and opens more blooms at once. It has a rather short stem. The huge bronze **R. B.** is a distinct variation in this group. The winged **Tecumseh** has quite an orchid like appearance. Another flower capable of making very large spikes is the rather dark colored **Tunia's Mahomet**. We have found **Xerxes** one of the most consistent performers of the lot and it is light enough so that florists can use it. While no longer new, **Zuni** is still well worth growing and can make very nice spikes.

While we have not mentioned nearly all the varieties we are growing, some have been grown only from bulblets and have not yet bloomed for us and a few others were not grown under sufficiently good conditions to allow us to evaluate them.
